Status	Generated baseline — human review required

“ **Verification boundary:** This page combines platform design guidance with static evidence from the release. It does not prove that every detected interface is enabled, reachable, secure, or operational in the deployed environment.

Purpose

The decision-advantage application layer that combines data, analytics, models and operational workflows into explainable recommendations and actions.

Operational value

Provides many of the useful outcomes associated with large enterprise data platforms without requiring every customer to adopt their full stack.

Differentiators

It is modular, edge-aware and directly connected to the operational representation, tasking and open semantic framework.

Platform connections

- OpenData
- OpenAnalytics
- OpenKnowledge
- OpenTask

Candidate REST/API interfaces

No component-specific REST route was associated by the scanner.

Candidate real-time interfaces

No component-specific WebSocket endpoint was associated by the scanner.

Configuration candidates

No component-specific environment variable was associated by the scanner.

Service candidates

No component-specific service definition was associated by the scanner.

Verification checklist

- Confirm the component is included and enabled in this edition/release.
 - Record its authoritative service, process/container, port, base URL and health endpoint.
 - Exercise its primary operator workflow and capture expected versus actual results.
 - Verify authentication, authorization, audit, error behavior and data handling policy.
 - Verify OpenBus/OpenKnowledge relationships and time/provenance metadata where applicable.
 - Document known limitations and the release in which they are corrected.
