

Installation Procedure

Installation Procedure

Field	Value
Distribution	BSS — OpenC5ISR
Product	OpenC5ISR
Release	0.15.1
Deployment	openc5isr.bss.dev
Source	/srv/bss/releases/OpenC5ISR-v0.15.0-20app
Evidence	Release manifests plus controlled deployment pattern
Source fingerprint	93926e8c834f1ed79c9017a4096f70c76d73ce4f870f104fbd0cf54b2bed50ee
Status	Generated baseline — human review required

“ **Verification boundary:** This page combines platform design guidance with static evidence from the release. It does not prove that every detected interface is enabled, reachable, secure, or operational in the deployed environment.

Candidate build/install entry points

Evidence	Invocation	Declared action
package.json	npm run start	npm run verify:startup && node server.js

Evidence	Invocation	Declared action
package.json	npm run test	python3 tests/integrated_smoke_test.py && python3 tests/openknowledge_opentask_ontology_smoke_test.py && python3 tests/opendaa_opendata_smoke_test.py && python3 tests/opendaa_openanalytics_smoke_test.py && python3 tests/opencop_smoke_test.py && python3 tests/smoke_test.py && python3 tests/openeyes_smoke_test.py && python3 tests/raspbots_agent_smoke_test.py && python3 tests/openpnt_smoke_test.py && python3 tests/openpnt_linuxptp_wrapper_smoke_test.py && python3 tests/openpnt_agent_smoke_test.py && python3 tests/external_integrations_smoke_test.py && python3 tests/compiled_deployment_smoke_test.py && node tests/openssa/test_openssa.js && python3 tests/openssa/test_sensor.py && python3 tests/openssa_opensof_smoke_test.py && python3 tests/openrf_opensof_smoke_test.py && python3 tests/openlvc_edge_gateway_test.py && python3 tests/openlvc_smoke_test.py && python3 tests/opencybersec_smoke_test.py && python3 tests/opencybersec_agent_smoke_test.py && python3 tests/openiia_smoke_test.py && python3 tests/openaar_mr_smoke_test.py
package.json	npm run verify:startup	node -e "require('./lib/openpnt-timing'); require('./lib/openpnt'); console.log('startup dependencies OK')"
edge/openssa-sensor/package.json	npm run start	node local_server.js 3000
edge/openssa-sensor/package.json	npm run check	node --check lib/openssa.js && node --check public/open-ssa/app.js && node --check local_server.js && python3 -m py_compile drivers/ssa_sensor.py tools/*.py demo/run_streaming_demo.py tests/*.py
edge/openssa-sensor/package.json	npm run test	npm run check && node tests/test_openssa.js && python3 -m unittest discover -s tests -v
third_party/ontowiki/Makefile	make clean	Make target
third_party/ontowiki/Makefile	make codebeautifier	Make target
third_party/ontowiki/Makefile	make codesniffer	Make target

Evidence	Invocation	Declared action
third_party/ontowiki/Makefile	make composer-install	Make target
third_party/ontowiki/Makefile	make debianize	Make target

third_party/ontowiki/debian/Makefile/Makefile	make package	Make target
third_party/ontowiki/debian/Makefile/Makefile	make prepare	Make target

Controlled installation procedure

1. Record the release artifact name, version, checksum, source and approval.
2. Back up configuration, persistent data, database state and the active proxy/service definitions.

3. Extract the release into a new immutable version directory; do not overwrite the active release.
4. Install dependencies using the release manifests and pinned lock files. Review install scripts before executing them as a privileged user.
5. Create/update edition-specific configuration and secrets outside the release directory.
6. Run unit/static tests and a local health check before switching production traffic.
7. Activate atomically through the current symlink/container tag/service definition, then restart only affected services.
8. Validate process state, local endpoints, Nginx routing, WebSockets, login, primary workflow and logs.
9. Record actual results and keep the previous release until the acceptance window completes.

Do not assume

The generator deliberately does not invent an install command when the release does not provide enough evidence. Promote a command into this page only after it has been executed successfully on a clean or controlled target.

Maintainer Notes

Add human-reviewed deployment notes, corrections, decisions, screenshots, and links here. Content outside the generated block is preserved on future runs.

Revision #2
