

Upgrade and Rollback

Upgrade and Rollback

Field	Value
Distribution	BSS — OpenC5ISR
Product	OpenC5ISR
Release	0.15.1
Deployment	openc5isr.bss.dev
Source	/srv/bss/releases/OpenC5ISR-v0.15.0-20app
Evidence	Lifecycle pattern and optional release comparison
Source fingerprint	93926e8c834f1ed79c9017a4096f70c76d73ce4f870f104fbd0cf54b2bed50ee
Status	Generated baseline — human review required

“ **Verification boundary:** This page combines platform design guidance with static evidence from the release. It does not prove that every detected interface is enabled, reachable, secure, or operational in the deployed environment.

Pre-upgrade gate

- Previous release path and rollback command are known and tested.
- Database/configuration migrations are identified, backed up and reversible or explicitly irreversible.
- External interfaces and dependent modules have compatibility expectations recorded.
- A maintenance/communications plan exists for user-visible interruption.
- Acceptance tests and responsible reviewer are assigned.

Upgrade sequence

```
backup → stage new release → install/validate dependencies → migrate if required  
→ switch active release → restart affected services → smoke/acceptance tests  
→ observe → approve or roll back
```

Rollback sequence

```
stop traffic/affected service → restore compatible data/config if required  
→ repoint active release → restart → validate local/public endpoints  
→ record incident and preserve failed-release evidence
```

Release-specific comparison

No previous release was supplied. Run with `--compare /path/to/previous-release` to generate a static change inventory.

Maintainer Notes

Add human-reviewed deployment notes, corrections, decisions, screenshots, and links here. Content outside the generated block is preserved on future runs.
