“ **Verification boundary:** This page combines platform design guidance with static evidence from the release. It does not prove that every detected interface is enabled, reachable, secure, or operational in the deployed environment.

Purpose

The operational tasking and workflow service for assigning, acknowledging, executing and completing effects tied to real objects and semantic task types.

Operational value

Turns situational awareness into accountable action and gives people and machines the same task state model.

Differentiators

Task definitions can be ontology-based and linked directly to tracks, locations, sensors, evidence and automated effects.

Verification checklist

- Confirm the component is included and enabled in this edition/release.
 - Record its authoritative service, process/container, port, base URL and health endpoint.
 - Exercise its primary operator workflow and capture expected versus actual results.
 - Verify authentication, authorization, audit, error behavior and data handling policy.
 - Verify OpenBus/OpenKnowledge relationships and time/provenance metadata where applicable.
 - Document known limitations and the release in which they are corrected.
