Status	Generated baseline — human review required

“ **Verification boundary:** This page combines platform design guidance with static evidence from the release. It does not prove that every detected interface is enabled, reachable, secure, or operational in the deployed environment.

Purpose

This book turns the scanned release into a deployment baseline. Commands and configuration must still be verified against the active instance before being treated as authoritative operations guidance.

Contents

Section	What it contains
---------	------------------

Planning & Prerequisites	Runtime, platform and dependency requirements inferred from the release.
Deployment Configuration	Environment variables, systemd, containers, Nginx and ports.
Installation & Lifecycle	Installation, verification, upgrade and rollback procedures.

How to maintain this book

Generated sections are replaced from release evidence on each run. Put reviewed corrections, deployment-specific facts, links and decisions in the Maintainer Notes area below the generated block. Mark pages as reviewed only after testing them against the named distribution and release.

Maintainer Notes

Add human-reviewed deployment notes, corrections, decisions, screenshots, and links here. Content outside the generated block is preserved on future runs.
